

# Lavinia-Elena Dimitrova

## Education

---

- **M.Sc. Computer Science** | University of Vienna, Austria **2022 – 2025**  
Master's Thesis: A C++ library of game AI algorithms tailored for real-time strategy game development.
- **B.Sc. Information and Communication Technology** | VIA University College, Denmark **2016 – 2020**

## Work Experience

---

|                               |                                                    |                          |
|-------------------------------|----------------------------------------------------|--------------------------|
| <b>.NET Software Engineer</b> | <b>Milestone Systems</b><br><i>Sofia, Bulgaria</i> | <b>07/2025 – 06/2026</b> |
|-------------------------------|----------------------------------------------------|--------------------------|

- Integrated and maintained the access control system with the main platform, using C#, .NET, and PostgreSQL.
- Build REST APIs for the core platform and standalone applications.
- Implemented a zone-based feature and designed backend services to manage groups of devices.
- Used C# and FlaUI to write automated end-to-end UI tests for the desktop application.

|                               |                                                       |                          |
|-------------------------------|-------------------------------------------------------|--------------------------|
| <b>Java Software Engineer</b> | <b>Semantic Web Company</b><br><i>Vienna, Austria</i> | <b>02/2020 – 12/2021</b> |
|-------------------------------|-------------------------------------------------------|--------------------------|

- Optimized and fixed bugs in the core product using Java 8.
- Developed a document processing service using Apache OpenNLP to lemmatize text on large document sets.
- Implemented REST APIs for the processing service, integrating it with the core platform via Spring Framework.
- Conducted unit and mock testing using JUnit and Mockito on all platform components.

|                                    |                                                  |                          |
|------------------------------------|--------------------------------------------------|--------------------------|
| <b>Student Front-End Developer</b> | <b>The LEGO Group</b><br><i>Billund, Denmark</i> | <b>02/2019 – 01/2020</b> |
|------------------------------------|--------------------------------------------------|--------------------------|

- Contributed to the maintenance of internal web applications, focusing on UI/UX improvements and bug fixes using SAPUI5 and JavaScript.
- Worked collaboratively in an Agile team, participating in Scrum ceremonies.

|                                  |                                                       |                          |
|----------------------------------|-------------------------------------------------------|--------------------------|
| <b>Software Developer Intern</b> | <b>everis S.L.U. Spain</b><br><i>Barcelona, Spain</i> | <b>08/2018 – 12/2018</b> |
|----------------------------------|-------------------------------------------------------|--------------------------|

- Used Java and Vaadin to design and develop a data curation system for CORDIS, European Commission's primary public repository.
- Automated the categorization of research data across multiple domains.
- Converted the repository into Linked Open Data using GraphDB, RDF and OWL.

## Projects

---

- **[2026] Job Application Tracker (C#/.NET, PostgreSQL, Docker, XUnit):** A REST API for tracking job applications, with JWT authentication and a tested, containerized setup.
- **[2025] Procedural Terrain Generator (C#, Unity):** Tool that procedurally generates customizable terrain meshes using layered Perlin Noise, with support for height-based coloring and automatic placement of scenery objects.

## Skills

---

- **Languages:** C# | C++ | Java
- **Frameworks:** .NET | ASP.NET | Entity Framework Core | Spring
- **Tools:** Visual Studio | Git | Jira
- **Databases:** PostgreSQL
- **Software Engineering:** OOP | REST API | SQL | Agile (Scrum)
